Spring的JDBC支持

一、JdbcTemplate 概述

- 1、是 spring 框架中提供的一个对象,是对原始 Jdbc API 对象的简单封装。
- 2、spring 框架为我们提供了很多的操作模板类。

```
操作关系型数据的:
    JdbcTemplate
    HibernateTemplate
操作 nosql 数据库的:
    RedisTemplate
操作消息队列的:
    JmsTemplate
```

url=

</dependency>

数据库连接

二、spring配置JdbcTemplate

```
**TecharacterEncoding=utf8**

1、引入相应jar包

**Project xml version="1.0" encoding="UTF-8"?>

**Project xmlns="http://maven.apache.org/POM/4.0.0"

**xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"

**xsi:schemaLocation="http://maven.apache.org/POM/4.0.0"

http://maven.apache.org/xsd/maven-4.0.0.xsd">

**modelVersion>**4.0.0**/modelVersion>**

**qroupId>com.itheima</groupId>

**artifactId>day04_eesy_01jdbctemplate</artifactId>

**version>1.0-SNAPSHOT</version>

**packaging>jar</packaging>**

**dependencies>

**dependency>

**groupId>org.springframework</groupId>**

**groupId>org.springframework
```

<artifactId>spring-context</artifactId> <version>5.0.2.RELEASE</version>

jdbc:mysq1://localhost:3306/mybatis?

```
<dependency>
      <groupId>org.springframework</groupId>
      <artifactId>spring-jdbc</artifactId>
      <version>5.0.2.RELEASE</version>
    </dependency>
    <dependency>
      <groupId>org.springframework</groupId>
      <artifactId>spring-tx</artifactId>
      <version>5.0.2.RELEASE</version>
    </dependency>
    <dependency>
      <groupId>mysql</groupId>
      <artifactId>mysql-connector-java</artifactId>
      <version>5.1.6</version>
    </dependency>
  </dependencies>
</project>
```

2、编写spring 的配置文件

```
<?xml version="1.0" encoding="UTF-8"?>
<beans xmlns="http://www.springframework.org/schema/beans"
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
    xsi:schemaLocation="http://www.springframework.org/schema/beanshttp://www.springframework.org/schema/beans.xsd">
```

配置连接池的三种方式

```
ApplicationContext ac = new ClassPathXmlApplicationContext("bean.xml"); //2.获取对象
    JdbcTemplate jt = ac.getBean("jdbcTemplate",JdbcTemplate.class); //3.执行操作
    jt.execute("insert into account(name,money)values('ddd',2222)"); }
```

- 2) DBCP连接池
- 3) C3P0连接池
